Shri Narendra Modi
Prime Minister of India

“ Skilling is building a better India.
If we have to move India towards
development then Skill Development
should be our mission. ”

Acknowledgements

FICSI is thankful to all organizations and individuals who have helped us in preparation of this Practical Guide.

We extend our special thanks to Ministry of Food Processing Industries (MoFPI) for providing funds and their unequivocal support for developing content through National Institute of Food Technology Entrepreneurship and Management (NIFTEM).

We also wish to extend our gratitude to all those who reviewed the content and provided valuable inputs for improving the quality, coherence, and content presentation of chapters.

About this book

This book is designed to provide skill training and/or upgrade the knowledge and basic skills to take up the job of a 'Food Products Packaging Technician' in the 'Food Processing' sector. All the activities carried out by a specialist are covered in this course. Upon successful completion of this course, the candidate will be eligible to work as a Food Products Packaging Technician.

This Practical Guide is designed to enable training for the specific Qualification Pack (QP). Each National Occupational Standards (NOS) is covered across Unit/s.

Key Learning Objectives for the specific NOS mark the beginning of the Unit/s for that NOS.

- Prepare and maintain work area and machineries for packaging food products
- Prepare for packaging food products
- Package food products
- Document and record keeping related to packaging food products
- Apply food safety, hygiene and sanitation standards for packaging food products.

S.No.	Modules and Units	Page No.
1.	Introduction	1
	Unit 1.1 – Organisational Standards and Norms	3
2.	Prepare and Maintain Work Area and Process Machineries for Packaging Food Products (FIC/N7001)	9
	Unit 2.1 – Prepare and Maintain Work Area	11
	Unit 2.2 – Prepare and Maintain Process Machineries	14
3.	Prepare for Packaging Food Products (FIC/N7002)	19
	Unit 3.1 – Plan Packaging Materials and Machineries	21
	Unit 3.2 – Organise Packaging Material, Equipment and Manpower	24
4.	Package Food Products (FIC/N7003)	29
	Unit 4.1 – Packaging of Food Products	31
	Unit 4.2 – Labeling of Packaged Food Products	37
	Unit 4.3 – Cleaning and Regular Maintenance of Equipment	40
5.	Complete Documentation and Record Keeping (FIC/N7004)	45
	Unit 5.1 – Document and Maintain Records of Packaging Materials	47
	Unit 5.2 – Document and Maintain Records of Packed Products	49
6.	Food Safety, Hygiene and Sanitation (FIC/N7004)	55
	Unit 6.1 – Safety and Sanitation Functions	57
	Unit 6.2 – Food Safety Hazards	63
	Unit 6.3 – Apply Food Safety Practices	67
7.	Professional and Core Skills	83
	Unit 7.1 – SWOT Analysis	85
	Unit 7.2 – Decision Making	86
	Unit 7.3 – Plan and Organise	88
	Unit 7.4 – Customer Centricity	91
	Unit 7.5 – Problem Solving	93
	Unit 7.6 – Analytical Thinking	95
	Unit 7.7 – Critical Thinking	97
8.	IT Orientation	101
	Unit 8.1 – Basics of Information Technology	103

1. Introduction

Unit 1.1 - Organisational Standards and Norms

10 hrs

FICSI
Food Industry Capacity and Skill Initiative

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Execute the roles and responsibilities as per the organization standard and norms
2. Demonstrate how to conduct yourself at the workplace
3. Demonstrate the personal hygiene and sanitation guidelines

UNIT 1.1: Organisational Standards and Norms

Unit Objectives

At the end of this unit, you will be able to:

1. Execute the roles and responsibilities as per the organization standard and norms
2. Demonstrate how to conduct yourself at the workplace
3. Demonstrate the personal hygiene and sanitation guidelines

1.1.1 Materials required for the practical

- Protective gloves
- Head caps
- Aprons
- Safety goggles
- Safety boots
- Mouthmasks
- Sanitiser
- Safety manual

1.1.2 Practical

Pre-requisite knowledge:

- Work flow chart and personal attributes.

Method:

1. Understand/ assign the roles and responsibilities to be followed as per the work flow chart given below.

Fig . 1.1.1. Roles and responsibilities of food products packaging technician

- When at workplace you must wear the personal protective equipment following the way it is depicted in the picture given below.

Fig. 1.1.2. Personal Protective Equipment (PPE)

- At workplace follow the safety instructions completely without any lapses.

Fig. 1.1.3. Safety symbols at workplace

Precautions:

- Make sure you are wearing safety gears.
- Do not waste the cleaning agent, sanitiser and water.
- Do not engage in smoking, spitting, chewing, sneezing or coughing over any food and eating in food preparation and food service areas.
- Report any illness or disease to the management and do not resume work unless treated and certified as fit to work.

Observation:

Sr no	Roles and responsibilities of food products packaging technician	Has the function being carried out as per specifications?
1		
2		
3		
4		
5		
6		

Conclusion:

Based on the observations, write your conclusions here:

Sr no	
1	
2	
3

6	

Notes

A large rectangular area enclosed by an orange border, containing 28 horizontal black lines for writing notes.

Lined writing area for notes or answers.

2. Prepare and Maintain Work Area and Process Machineries for Packaging Food Products

FICSI
Food Industry Capacity and Skill Initiative

Unit 2.1 - Prepare and Maintain Work Area

10 hrs

Unit 2.2 - Prepare and Maintain Process Machineries

15 hrs

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Demonstrate the appropriate method for cleaning and maintaining the work area
2. Exhibit that the work area is safe and hygienic for food processing
3. Check if the machines and tools required for production are in working condition
4. Clean process machineries using recommended cleaning agents and sanitisers

UNIT 2.1: Prepare and Maintain Work Area

Unit Objectives

At the end of this unit, you will be able to:

1. Demonstrate the appropriate method for cleaning and maintaining the work area
2. Exhibit that the work area is safe and hygienic for food processing

2.1.1 Materials required for the practical

- Cleaning agents (like detergents, hypochlorite, liquid chlorine, hydrogen peroxide, ozone etc.)
- Sanitisers
- Disinfectants
- Floor area layout

2.1.2 Practical

Pre-requisite knowledge:

- Prepare and Maintain Work Area and Process Machineries.

Method:

- Mark food and non-food contact surfaces.

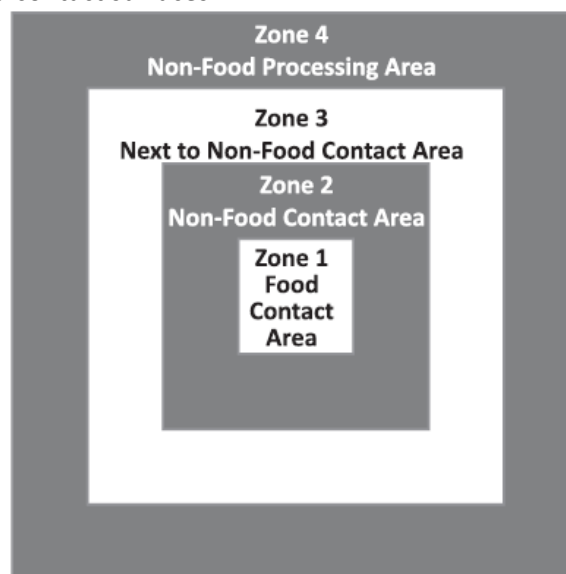

Fig. 2.1.1. Area Layout

1. Follow the cleaning and sanitisation SOP for work area cleaning.
2. Refer to the SOP and manufacturers' instructions for appropriate cleaning agents, sanitisers and cleaning procedure.
3. Take the tools, trolleys, crates, utensils etc. available at the processing unit to the designated areas for cleaning.
4. Rinse with potable water and cleaning agents to wash them perfectly.
5. Sterilise the tools and other equipment for next use with 500 ppm sodium hypochlorite or the recommended disinfectant as per the SOP.

6. Remove gross debris from surfaces of work area.
7. Apply detergent solution to loosen soil and bacterial film and hold them in solution or suspension.
8. Rinse with potable water to remove loosened soil and residues of detergent.
9. Disinfect with subsequent rinsing (where necessary) as per manufacturers' instruction.
10. Dry clean using appropriate methods like blow dry for removing and collecting the residue and debris. (For e.g.: loosened threads from dusters, crumbs and burnt products etc.)
11. Check pest control measures are in place and work area is pest free.
12. Check that water waste is going to an Effluent Treatment Plant (ETP).
13. Check that solid waste is properly going into the solid waste treatment plant or composting unit.
14. Place the sanitiser and disinfectant in the designated store area after using it.

Area/ item	Frequency	Equipment and cleaning agents and sanitisers	Cleaning method	Person responsible
Structure				
Floors	End of each day or as frequently required	Brooms, damp mop, brush, detergent and sanitiser	1. 2. 3. 4.	
Walls, Windows and ceiling	Monthly or as required	Wiping cloth, brush and detergent	1. 2. 3. 4.	
Food contact surfaces				
Work tables and sinks	After use	Wiping cloth, detergent and sanitiser	1. 2. 3. 4.	

Fig . 2.1.2. Sample work area cleaning SOP

Fig. 2.1.3. Cleaning materials

Fig. 2.1.4. Pressure cleaning

Precautions:

- Always wear protective gloves and goggles when recommended.
- Before using hypochlorite, and liquid chloride, ensure that pH and concentration level is maintained as per the SOP.
- Ensure that the area is well ventilated while using hydrogen peroxide.
- Always read the instructions on the label before use, even if it's a product you use regularly. You don't want to accidentally use the product in the wrong area or use it incorrectly.
- Always note the warning symbols and safety precaution symbols displayed in the work area and follow them.
- Never store chemicals near food, food storage areas or any tools or equipment that will touch food. Keep them under lock in a designated area only for cleaning tools and chemicals.
- Never leave chemicals on or near a food preparation area. That includes on top of counters, stoves, etc.
- Do not store chemicals above food prep areas, kitchen sinks or drain boards.
- Store chemicals in their originally labelled containers and make sure they are closed properly.
- Never use food storage containers to store, transport or mix chemicals.
- Always spray chemicals holding the spray nozzle away from you.
- Never mix two different chemicals together.

Observation:

Sr no	Name of food contact surfaces cleaned	Name of cleaning agents used	Name of sanitisers used	Amount of cleaning agent used
1				
2				
3				
4				
5				

Conclusion:

Sr no	Activities conducted to make work area clean and safe	(Yes/No)
1	Identification of food and non-food contact surfaces	
2		
3		
4		
5		

UNIT 2.2: Prepare and Maintain Process Machineries

Unit Objectives

At the end of this unit, you will be able to:

1. Check if the machines and tools required for production are in working condition
2. Clean process machineries using recommended cleaning agents and sanitisers

2.2.1 Materials required for the practical

- Automatic Form Fill Seal Machine
- Powder Packing Machine
- Bottle Filling Machine
- Paste Filling Machine
- Multi Track Machine
- Wrapping Machine
- Laminated Packaging Paper
- Bucket Conveyor
- Continuous Sealing Machine
- Labelling machine
- Sleeveers or Sleeving Equipment
- Pallet Loading and Pallet Securing Machine

2.2.2 Practical

Pre-requisite knowledge:

- Prepare and Maintain Work Area and Process Machineries.

Method:

1. Prepare the list of machineries present in the processing unit.
2. Execute the cleaning of equipment and machineries as per the SOP.
3. Refer to the manufacturers' manual for recommended cleaning agents and sanitisers.
4. Execute CIP for the internal cleaning of the machines and equipment.
5. Carry out the COP for the parts like fittings, gaskets, valves, tank vents, grinders, pumps, knives and nozzles as per company SOP.
6. Carry out SIP process to sterilise, disinfect and sanitise the machineries.
7. If required apply high air pressure cleaning by removing the equipment parts and replacing them after cleaning.
8. Check for cleaning efficiency by swab test or rinse test.
9. Apply oil and grease to the required parts as part of routine maintenance

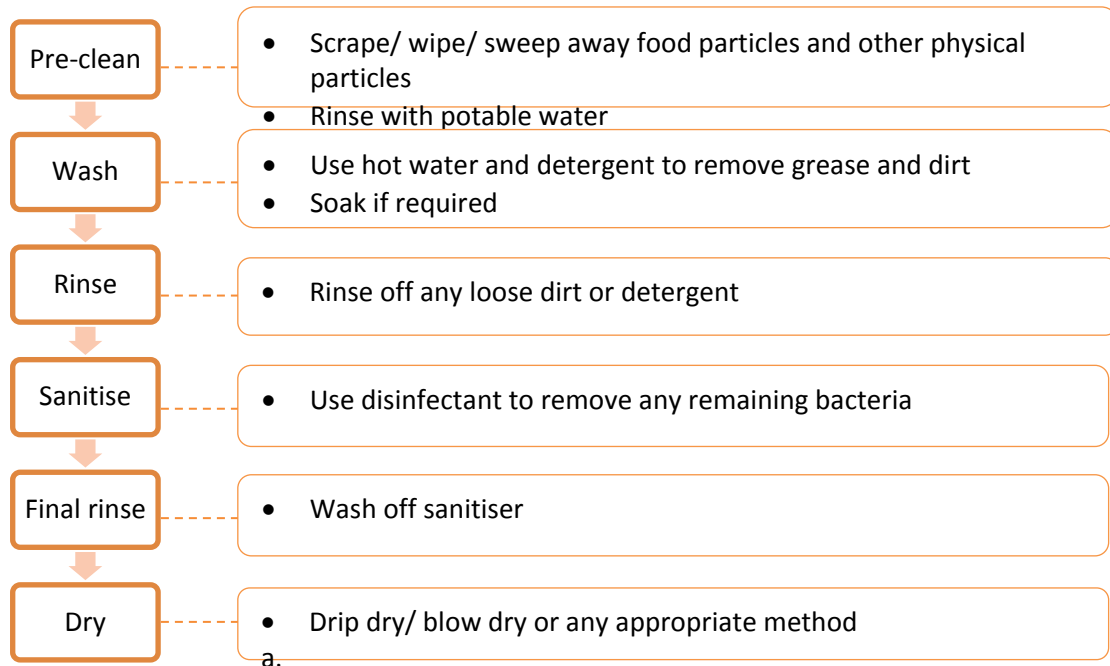

Fig. 2.2.1.Steps in cleaning procedure

Precautions:

- Ensure machines are unplugged from the power source before cleaning.
- Make sure that after cleaning the machines and equipment are ready for use.
- Report any discrepancies in the equipment or machineries to the supervisor/ required authority.

Observation:

Sr no	Name of the activities	Time taken to conduct the process (hrs)
1		
2		
3		
4		
5		

Conclusion:

Sr no	Parts used for CIP	Parts used for COP	Parts used for SIP
1			
2			
3			
4			
5			

3. Prepare for Packaging Food Products

FICSI
Food Industry Capacity and Skill Initiative

Unit 3.1 - Plan Packaging Materials and Machineries

10 hrs

Unit 3.2 - Organise Packaging Material, Equipment and Manpower

10 hrs

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Demonstrate how to plan the production process
2. Demonstrate how to calculate the process time for effective utilisation of machineries
3. Explain how to plan batch size considering full capacity utilisation of equipment

UNIT 3.1: Plan Packaging Materials and Machineries

Unit Objectives

At the end of this unit, you will be able to:

1. Demonstrate how to plan the production process
2. Demonstrate how to calculate the process time for effective utilisation of machineries

3.1.1 Materials required for the practical

- Production process chart.

3.1.2 Practical

Pre-requisite knowledge:

- Prepare for Packaging Food Products.

Method:

1. Every organisation as a standard operating procedure (SOP) follows a production procedure:

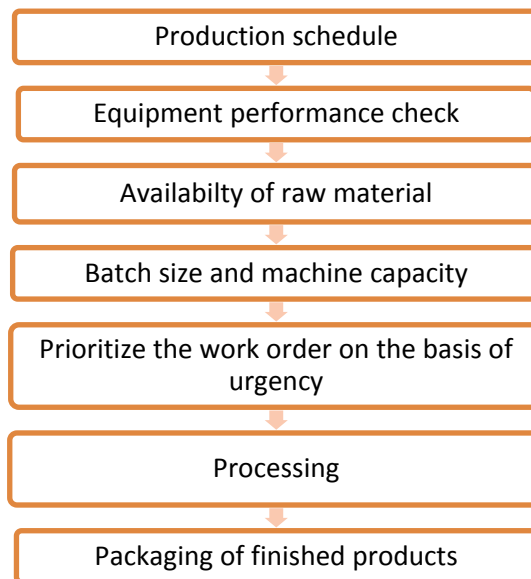

Fig. 3.1.1. Production flow chart

2. Check the production schedule of the day and note it down in your notepad.
3. Check that required machineries are performing well and ready for production.
4. Check the availability raw materials.
5. Prioritise the lot which has to be delivered urgently as per the SOP and stock rotation system (FIFO and FEFO) as applicable.
6. Identify the packaging materials required as per the SOP.
7. Identify the equipment and machines as per the SOP.
8. Calculate the number of times you will require to operate the machine for the given batch size and machine capacity

9. Based on the batch size and the machine availability select the processing machines for optimum utilization.

Formula for calculation:

Consider the machine capacity is = x kg

The batch size = y kg

No. of times the machine needs to be operated for optimum utilization = z

$$z = \frac{x}{y}$$

For eg: if x=200 kg, y=50 kg then:

$$z = \frac{200}{50}$$

$$z = 4$$

Capacity of the machine = x	Batch size = y	No. of times the machine to be operated for the given capacity = z

10. Note down the machine capacity, batch size and the results of the calculations in the observation table.

Precautions:

- Follow the production schedule and the time as specified.
- Follow the SOP for the packaging material to be used.
- Follow the FIFO and FEFO stock rotation system as specified in the SOP/production schedule.
- Check the machineries are working properly before starting production.
- Wear the personal protective equipment during processing activities.

Observation:

Sr no	Production size	Batch size	Machine or equipment to be used	No. of times the machine/equipment to be used	Duration of the process
1					
2					
3					
4					
5					

Conclusion:

Sr no	Batch size	Total production time	Is it as per schedule (Y/N)
1			
2			
3			
4			
5			

UNIT 3.2: Organise Packaging Material, Equipment and Manpower

Unit Objectives

At the end of this unit, you will be able to:

1. Demonstrate the calculation of raw material required for getting desired quantity of finished product

3.2.1 Materials required for the practical

- Work flow diagram/chart
- SOP
- Food safety manual

3.2.2 Practical

Pre-requisite knowledge:

- Prepare for production of packaging food products.

Method:

1. Identify the type of production line:
 - Automated production line
 - Semi-automated production line
 - Manual production line
2. Based on the type of production line plan the processing activities to calculate efficiency of equipment and manpower utilization.

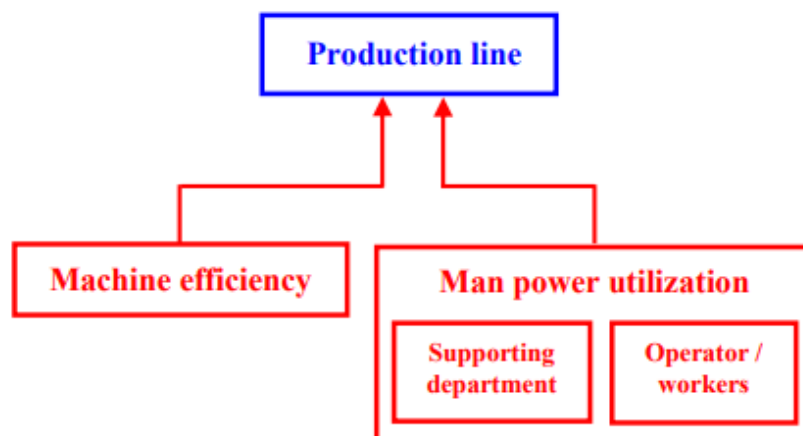

Fig .3.2.1 Factors of production line

3. Calculate the machine efficiency using following formula given:

- Actual Operation Time: Run time for a machine or system to produce an output from the moment it has started for operation.
- Planned Operation Time: Actual run time of the machine removing all the stops during the operation (for eg: breakdowns, change over, etc.)
- Machine Ideal Cycle Time: The minimum cycle time that your process can be expected to achieve in optimal circumstances.
- Overall Equipment Efficiency: Takes into account all losses, resulting in a measure of truly manufacturing time. It gives a picture of how effective the manufacturing process is running.

Formula to calculate machine efficiency		Machine efficiency
Availability (A) =	$\frac{\text{Actual Operation Time}}{\text{Planned Operation Time}}$	
Performance (P) =	$\frac{(\text{Machine Ideal Cycle Time}) \times (\text{Total Pieces Produced})}{(\text{Planned Operation Time})}$	
Quality (Q) =	$\frac{\text{Good Pieces Produced}}{\text{Total Pieces Produced}}$	
Overall Equipment Efficiency (OEE) =	A X P X Q	

4. Calculate manpower utilisation for manual and semi-automatic production line in terms of operators/workers by using following formula:

Type of production line	Formula to calculate	Manpower utilization (M)
Manual	$\frac{\text{Actual Production Output}}{\text{Target Production Output}}$	
Semi-automatic	$\frac{(\text{Machine Ideal Cycle Time}) \times (\text{Total Pieces Produced})}{(\text{Actual Operation Time}) - (\text{Machine Ideal Cycle Time}) \times (\text{Total Pieces Produced})}$	
	M =	

5. Check that whether preventive maintenance is in place or not.

6. Enter all the details in the observation sheet.

Precautions:

- Use the packaging materials which meet the quality parameters.
- Check the machineries are working properly.
- Wear the personal protective equipment during processing activities..

Observation:

Sr no	Products to packed	Type of packaging	Machine to be used for packaging
1			
2			
3			
4			
5			
6			

Conclusion:

Sr no	Batch details	Parameters as specified in the schedule (Y/N)	Can be considered for production (Y/N)
1			
2			
3			
4			
5			
6			

Notes

A large rectangular area with a thin orange border, containing 30 horizontal lines for writing notes.

4. Package Food Products

Unit 4.1 - Packaging of Food Products	25 hrs
Unit 4.2 - Labeling of Packaged Food Products	5 hrs
Unit 4.3 - Cleaning and Regular Maintenance of Equipment	10 hrs

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Carry out the process of packaging of food products
2. Carry out the process of labeling of food products
3. Carry out the process of post-production cleaning and regular maintenance work

UNIT 4.1: Packaging of Food Products

Unit Objectives

At the end of this unit, you will be able to:

1. Carry out the process of packaging of food products

4.1.1 Materials required for the practical

- Automatic Form Fill Seal Machine
- Powder Packing Machine
- Bottle Filling Machine
- Paste Filling Machine
- Multi Track Machine
- Wrapping Machine
- Laminated Packaging Paper
- Bucket Conveyor
- Continuous Sealing Machine
- Labeling machine
- Sleeveers or Sleeving Equipment
- Pallet Loading and Pallet Securing Machine

4.1.2 Practical

Pre-requisite knowledge:

- Package Food Products.

Method:

1. Food products packaging are of three types as given below:

Fig.4.1.1. Types of packaging

2. Identify the packaging material and machinery as per the SOP.
3. Feed the products that need to be packed.
4. Feed packaging material.
5. Checks the weight adjust controls, if required.
6. Position the filling for packaging.
7. Set the conveyor line.
8. Check that the product is filled and packed.
9. Remove the packaged product.

Fig. 4.1.2. Automatic form fill seal machine

They have widespread application, the packaging material is fed off a roll, shaped, filled, sealed and separated.

Fig. 4.1.3. Powder packing machine

Also called Auger Machines or Auger Fillers is specially designed for packaging of powders.

Fig. 4.1.4. Bottle filling machine

IT is used for mineral water, milk, juices and anything liquid, the capping or crowning are done automatically

Fig. 4.1.4. Paste filling machine

Used for packing semi liquids and cream type products

Fig. 4.1.5. Multi track machine

It is a conveyor system

Fig. 4.1.6. Wrapping machine

Used for flexible packaging material (paper, aluminium, plastic film) and is most common in bakery and confectionery for single items which can range from confectionery (count line), bars and cakes through to cheese and sausages

Fig. 4.1.7. Laminated Packaging machine

Used for food products to be packed in plastic laminated sealed pouches

Fig. 4.1.8. Continuous sealing machine

Perform sealing operation of pouches on basis of heat sealing process and find their application for packaging tea, namkeen, rice, pulses etc.

Types of primary packaging material for different food products

Name of food	Packaging
Milk	<ul style="list-style-type: none"> • Pasteurised flavoured milk in glass bottles capped/ LDPE (Low-density polythelene) lined cartons/aseptic cartons • Sterilised flavoured milk in glass bottles capped/ sanitary cans/ poly laminated paper packs in tetrahedron • Sterilised cream in hermetically sealed containers/LDPE lined cartons/ aseptic cartons • Condensed milk in hermetically sealed containers/LDPE lined cartons/ aseptic cartons sealed by cement • Fermented milk products and Dahi in glass bottles/ any other suitable container and capped. Stored at temperatures below 10oC • Rosgolla are packed in open top sterilised sanitary cans or polystyrene tubs or any other suitable containers with as little air as possible • Milk powder and cereal weaning foods are hermetically sealed. In order to clean containers in such a way as to protect them from deterioration, a mixture of N₂ and CO₂ gas has to be passed
Fruits and Vegetables	<ul style="list-style-type: none"> • Raw vegetables packed loose in bulk/ packed in containers for trading and transport. It is done in new loosely woven gunny bags / wooden/ plastic crates or in lined / unlined corrugated fiberboard boxes • Onion and garlic packed in sound, clean, new loosely woven gunny bags, net bags, bamboo baskets / palm leaf baskets / wooden crates / lined or unlined corrugated fiberboard boxes to allow proper aeration of the bulbs • Tomatoes to be packed in baskets / wooden boxes /lined or unlined corrugated fiberboard boxes such that they are not unduly pressed when the lid is closed • Fresh chillies to be packed in gunny bags / bamboo baskets/ corrugated boxes lined or unlined with proper aeration • Super grade fruits to be packed wrapped individually either in tissue paper/ any other suitable material before being packed into the container to prevent it from rubbing along with straw • Juices, jams, jellies and marmalades to be packed in glass bottles/open top cans. Containers have to be hermetically sealed which could be lacquered or plain

Name of food	Packaging
Meat, Fish and Poultry Products	<p>Meat</p> <ul style="list-style-type: none"> • To be wrapped in polyethylene sheets or bags and delivered in clean, rust free and closed containers • If the total time is of more than two hours, ice is added • Meat supplied in distant market then the packaging must be able to withstand repeated handling and an outlet for draining water • CO₂ used for chilling if the destination is in range of one hour • CO₂ and ice used if it is being transported to a distance of 6 hours <p>Cooked Meat</p> <ul style="list-style-type: none"> • To be packed in butter paper / grease proof clean wrapping material put in big polyethylene cover • The products are vacuum packed using suitable wrapping materials such as PET/ LDPE <p>Dressed chicken</p> <ul style="list-style-type: none"> • To be packed into suitable sized polyethylene bags/ other suitable packing material • Before final sealing one needs to ensure no air is trapped inside • Vacuum packing or shrink wrapping of the packs is done • After the air inside is expelled, the bag should be sealed on a sealer <p>Egg powder</p> <ul style="list-style-type: none"> • It is gas packed using nitrogen in suitable tins/plate containers/ flexible packaging materials • PET/LDPE laminate is used as alternate options <p>Fish</p> <ul style="list-style-type: none"> • The fresh product should be packed in polyethylene-lined insulated containers, made of plywood, country wood/ plastic. • The thickness of insulation may vary from 15 to 30 mm depending upon the storage period and the mode of transport • Thermocole or fiberglass may be used as insulation material • Adequate drainage of melted ice may be provided
Bakery and Confectionary Products	<p>Bread is to be wrapped in slice form in LDPE coated poster paper/ clean waxed paper, grease-proof paper/ non-toxic wrapper</p> <p>Biscuit</p> <ul style="list-style-type: none"> • It is done in tins/plate, cardboard paper or other suitable material such as cello/LDPE, OPP/LDPE, PET/LDPE and also paper/LDPE, foil/LDPE • The biscuits should not come in direct contact with the packing material other than grease-proof/ sulphate paper, cellulose film/ aluminium foil laminate • The biscuits in tins/plate containers should not come in direct contact with the metal walls • Cakes to be wrapped /packed in clean waxed paper, grease-proof polyethylene, glassine/LDPE/ other suitable wrapper or tins

Name of food	Packaging
Protein-rich foods	<ul style="list-style-type: none"> Protein-Rich extruded foods may be packed in moisture proof paper bags(multi-layered, polyethylene lined)/ pouches made from BOPP/LDPE, glassine/LDPE/HDPE (high density polyethylene) woven bags Peanut butter to be packed in wide-mouthed glass jars/ polystyrene tubs / suitable container of the required size and shape which is air tight sealed
Edible Starches and Starch Products	<ul style="list-style-type: none"> Flours and starches to be packed in LDPE coated jute bags or LDPE coated raffia bags Edible spray dried potato flour to be packed in tinsplate containers. These should be packed materials made of HDPE / metallised polyester bags / pouches made from other flexible laminates such as BOPP/LDPE
Oils and Fats	<ul style="list-style-type: none"> Oil packaging material used may be tinsplate containers, glass bottles, rigid plastic containers of HDPE, food grade PVC, PET and flexible pouches made of plastic film/foil/laminate Fat, Vanaspati to be packed in suitable sealed packages, as, flexible packs and well closed tinsplate containers of specific weights
Food Grains and Food Grain products	<ul style="list-style-type: none"> Cereal grains to be packed in new, clean jute bags or LDPE coated jute bags and raffia bags Cereal flours should be packed in LDPE coated jute bag/LDPE coated raffia bags or single sound A-twill or B-twill jute bags
Sugar and honey	<ul style="list-style-type: none"> Sugar to be packed in polyethylene coated Hessian bags/ coated raffia bags/ twill jute bags sealed by stitching Cube sugar to be packed as per weight of 0.5 kg per carton lined with LDPE Honey to be packed in wide mouthed containers of glass/ tinsplate lidded with non-corrosive caps/cork washers
Stimulant foods	<ul style="list-style-type: none"> Tea to be packed in flexible packaging materials / laminates such as LDPE, paper coated LDPE, PET/LDPE and BOPP/LDPE to retain freshness Roasted and ground coffee to be packed in tinsplate, glass containers, metal foil, plastic films/laminated pouches of paper/LDPE, PET/LDPE and BOPP/LDPE Chocolates to be packed in tinsplate, plastic, grease-proof paper, aluminium foil or laminates made of paper/LDPE, BOPP/LDPE to avoid odour contamination
Alcoholic Drinks and Carbonated Beverages	<ul style="list-style-type: none"> Carbonated beverages to be filled in glass containers/ cans/ PET bottles/ plastic containers/dispensing units as per ISO regulations Beer to be filled in glass /PET bottles/cans placed in corrugated boxes or wooden cases as per ISO regulations
Spices and condiments	<ul style="list-style-type: none"> Chillies to be packed in jute bags/pouches made from PET/EVA or BOPP/ EVA/suitably lined wooden cases/LDPE coated raffia bags Black pepper to be packed in jute bags/LDPE coated raffia bags sealed by stitching Cloves to be packed in air-tight containers made of a material which does not affect the cloves like PET/LDPE

Primary packaging

Secondary packaging

Tertiary packaging

Transit packaging

Fig. 4.1.9. Continuous sealing machine

UNIT 4.2: Labeling of packaged products

Unit Objectives

At the end of this unit, you will be able to:

1. Carry out the process of labeling of food products

4.2.1 Materials required for the practical

- Automatic Form Fill Seal Machine
- Powder Packing Machine
- Bottle Filling Machine
- Paste Filling Machine
- Multi Track Machine
- Wrapping Machine
- Laminated Packaging Paper
- Bucket Conveyor
- Continuous Sealing Machine
- Labeling machine
- Sleevors or Sleeving Equipment
- Pallet Loading and Pallet Securing Machine

4.2.2 Practical

Pre-requisite knowledge:

- Package Food Products.

Method:

1. Once packing is done in the selected packaging material, labeling needs to be done.
2. A label should have following details. Below is an illustration:

Low Fat Breakfast Cereals 1
Mango, Walnut and Royal Jelly 2

Low fat breakfast cereals contains mango pieces, walnuts and royal jelly

3 Nutrition Information
Serving per package: (insert number of servings)
Serving size: g (or mL or other units as appropriate)

	Qty per Serving	Qty per 100g (or ml)
Energy	kJ (Cal)	kJ (Cal)
Protein	g	g
Total fat	g	g
Saturated fat	g	g
Carbohydrate	g	g
Sugar	g	g
Sodium	mg (mmol)	mg (mmol)
(insert any other nutrient or biologically active substance to be declared)	g, mg, ug (or other units as appropriate)	g, mg, ug (or other units as appropriate)

4 INGREDIENTS:
Whole grain wheat, corn, rolled oats, palm oil, aspartame, mango pieces [mango, mango juice, humectant (glycerol), tartrazine, natural mango flavour], royal jelly, walnuts, minerals (Calcium carbonate, iron sulphate), vitamins (Vitamin C, Vitamin B6, Folic acid, Vitamin B12) and spices.

7 PHENYLKETONURICS:
CONTAINS PHENYLALANINE

8 WARNING - THE PRODUCT MAY NOT BE SUITABLE FOR ASTHMA ALLERGY SUFFERERS.

5  **6**  **9**

2	Pictures displayed
3	Product's nutritional information
4	Product's ingredients
5	Healthier choice symbol
6	Product's process followed symbol
7	Product contains any special food ingredient
8	Any warning related to product (allergens)
9	Name of the manufacturer
10	Any special nutritional value
11	Product shelf-life
12	Name of the country where the product is manufactured
13	Product net weight

Fig. 4.2.2. Labelling machine

Apply labels and decoration onto all types of packaging containers, display, point-of-sale and transit packs

Fig. 4.2.3. Sleeveers or sleeving machine

These equipment apply a sleeve of thermoformable or stretch material to the neck or body of the container, are generally used to apply tamper evident labels. Shrink sleeve labels are also used on products which do not have surfaces suitable for a conventional label

Fig. 4.2.4. Pallet loading and pallet securing machine

Pallet Forming, Dismantling and Securing machines are packaging machines that assemble or dismantle pallet loads of products, groups of packages or rigid containers on a pallet, with little or no manual intervention, and secure the load on the pallet for security and stability during transportation

Precautions:

- Make sure label is having all the information.

UNIT 4.3: Cleaning and Regular Maintenance of Equipment

Unit Objectives

At the end of this unit, you will be able to:

1. Carry out the process of post-production cleaning and regular maintenance work

4.3.1 Materials required for the practical

- Cleaning agents (like detergents, hypochlorite, liquid chlorine, hydrogen peroxide, ozone etc.)
- Sanitisers
- Disinfectants
- Floor area layout
- Tool box

Fig. 4.3.1. Tool box

It is a box to organize, carry, and keep the tools safe

4.3.2 Practical

Pre-requisite knowledge:

- Dry/Dehydrate Fruits and Vegetables

Method:

1. Follow the cleaning and sanitisation SOP for work area cleaning.
2. Refer to the SOP and manufacturers' instructions for appropriate cleaning agents, sanitisers and cleaning procedure.
3. Take the tools, trolleys, crates, utensils etc. available at the processing unit to the designated areas for cleaning.
4. Rinse with potable water and cleaning agents to wash them perfectly.
5. Sterilize the tools and other equipment for next use with 500 ppm sodium hypochlorite or the recommended disinfectant as per the SOP.
6. Remove gross debris from surfaces of work area.
7. Apply detergent solution to loosen soil and bacterial film and hold them in solution or suspension.

8. Rinse with potable water to remove loosened soil and residues of detergent.
9. Disinfect with subsequent rinsing (where necessary) as per manufacturers' instruction.
10. Dry clean using appropriate methods like blow dry for removing and collecting the residue and debris. (for eg: loosened threads from dusters, crumbs and burnt products etc.)
11. Check pest control measures are in place and work area is pest free.
12. Check that water waste is going to an Effluent Treatment Plant (ETP).
13. Check that solid waste is properly going into the solid waste treatment plant or composting unit.
14. Place the sanitiser and disinfectant in the designated store area after using it.
15. Prepare the list of machineries present in the processing unit.
16. Execute the cleaning of equipment and machineries as per the SOP.
17. Refer to the manufacturers' manual for recommended cleaning agents and sanitisers.
18. Execute CIP for the internal cleaning of the machines and equipment.
19. Carry out the COP for the parts like fittings, gaskets, valves, tank vents, grinders, pumps, knives and nozzles as per SOP.
20. Carry out SIP process to sterilise, disinfect and sanitise the machineries.
21. If required apply high air pressure cleaning by removing the equipment parts and replacing them after cleaning.
22. Check for cleaning efficiency by swab test or rinse test.
23. Apply oil and grease to the required parts as part of routine maintenance.

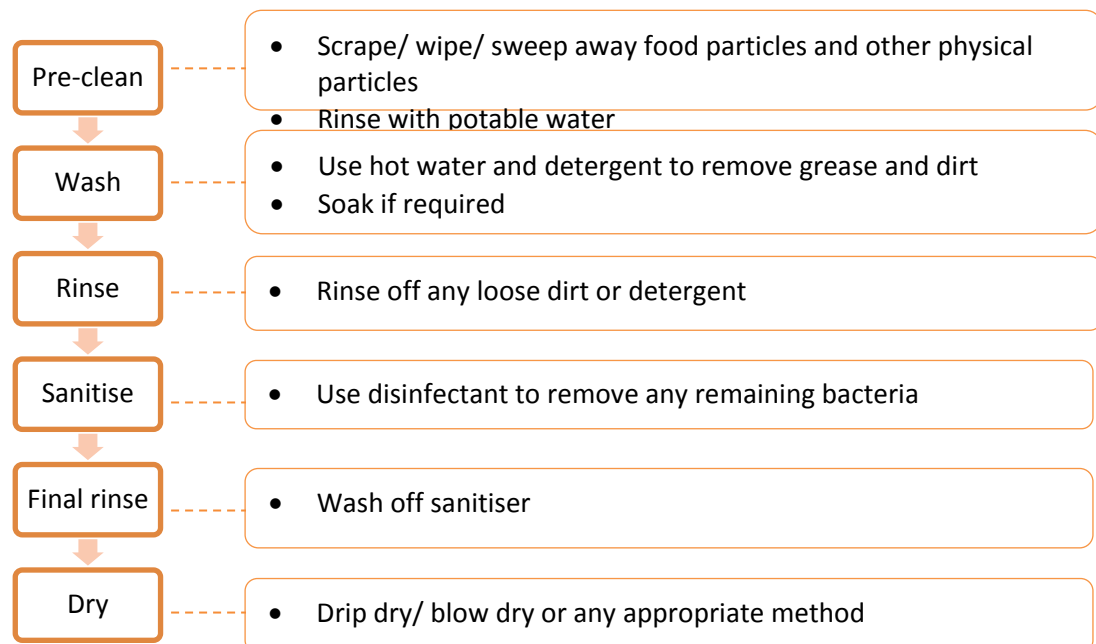

Fig. 4.3.2. SOP-Post production cleaning and regular maintenance process

Precautions:

- Ensure machines are unplugged from the power source before cleaning.
- Make sure that after cleaning the machines and equipment are ready for use.
- Report any discrepancies in the equipment or machineries to the supervisor/ required authority.
- Make sure cleaning agents and sanitisers are used judiciously.
- Wash your hands with sanitisers after cleaning and maintenance activity.

Notes

A large rectangular area with a thin orange border, containing 30 horizontal lines for writing notes.

5. Complete Documentation and Record Keeping

FICSI
Food Industry Capacity and Skill Initiative

Unit 5.1 - Packaging Materials Records

2 hrs

Unit 5.2 - Records of Packed Products

2 hrs

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Demonstrate the process of maintaining documentation for packaging materials.
2. Execute the process of documenting and maintenance of records of packed products.

UNIT 5.1: Packaging Material Records

Unit Objectives

At the end of this unit, you will be able to:

1. Demonstrate the process of maintaining documentation for packaging materials

5.1.1 Materials required for the practical

- Raw material/stock register
- Processing book/register
- Sales book
- Weighing machine
- Hygrometer
- Refractrometer

5.1.2 Practical

Pre-requisite knowledge:

- Complete documentation and record keeping.

Method:

- Production unit has three types of register/book.

Fig. 5.1.1. Types of register/book

1. Maintain the details of packaging materials available at the production unit or plant in the stock register.
2. Use the observation table and enter the details of the raw materials.
 - Enter the type of packaging materials available at the plant.
 - Count the different types of packaging materials available.
 - Enter the count of each type of packaging material in the stock register.

Precautions:

- Make sure that you make the correct entry after checking the packaging materials physically.
- Ensure all records are up-to-date as per SOP and are always ready for audits.

Observation:

Sr no	Type of packaging material	Quality	Total number of packaging materials in stock
1			
2			
3			
4			
5			

Conclusion:

Stock register updated for the following packaging materials:

Sr no	Type of packaging material
1	
2	
3	
4	
5	

UNIT 5.2: Records of Packed Products

Unit Objectives

At the end of this unit, you will be able to:

1. Execute the process of documenting details of finished products

5.2.1 Materials required for the practical

- Finished goods register
- ERP Software

5.2.2 Practical

Pre-requisite knowledge:

- Complete Documentation and Record Keeping.

Method:

1. Check the packaging of the finished goods is as per the SOP.
2. Check the labels of the finished goods for all the required entries as per the SOP and FSSAI guidelines.
3. Record the details of finished/ packed goods in the finished goods register.
4. Enter the details of finished/ packed goods in the ERP software, if available.
5. Maintain appropriate records of packaging material receipt, stock of existing packaging material, packaging material used in production, packaging material in storage, etc. according to the SOP.
6. Retain the updated records for a period of one year or till shelf-life of the product whichever is more (as per the SOP) for periodic audits.

List of records as mandated under Part 2 of Schedule 4 of Food Safety & Standards (Licensing & Registration of Food Businesses) Regulation, 2011 are:

Sr. No.	Records for	Clause	Requirement
1	Facilities	4.1.3	Water storage tanks shall be cleaned periodically and records of the same shall be maintained in a register
2	Food operations and controls	5.1.3	Records of raw materials, food additives and ingredients as well as their source of procurement shall be maintained in a register for inspection
3	Audit, documentation and records	8.2	Appropriate records of food processing / preparation, production / cooking, storage, distribution, service, food quality, laboratory test results, cleaning and sanitation, pest control and product recall shall be kept and retained for a period of one year or the shelf-life of the product, whichever is more
4	Sanitation and maintenance of establishment premises	9.1.1	A cleaning and sanitation programme shall be drawn up and observed and the record thereof shall be properly maintained, which shall indicate specific areas to be cleaned, cleaning frequency and cleaning procedure to be followed, including equipment and materials to be used for cleaning. Equipment used in manufacturing will be cleaned and sterilized at set frequencies

Sr. No.	Records for	Clause	Requirement
5	Sanitation and maintenance of establishment premises	9.2.3	Pest infestations shall be dealt with immediately and without adversely affecting the food safety or suitability. Treatment with permissible chemical, physical or biological agents, within the appropriate limits, shall be carried out without posing a threat to the safety or suitability of food. Records of pesticides / insecticides used along with dates and frequency shall be maintained
6	Personal hygiene	10.1.2	Arrangements shall be made to get the food handlers / employees of the establishment medically examined once in a year to ensure that they are free from any infectious, contagious and other communicable diseases. A record of these examinations signed by a registered medical practitioner shall be maintained for inspection purpose
7	Personal hygiene	10.1.3	The factory staff shall be compulsorily inoculated against the enteric group of diseases as per recommended schedule of the vaccine and a record shall be kept for inspection
8	Condition of license	8	Maintain daily records of production, raw materials utilization and sales separately
9	Condition of license	14	The manufacturer/importer/distributor shall buy and sell food products only from, or to, licensed/registered vendors and maintain record thereof

7. Enter the details of the finished goods register/ ERP application as per the SOP.
 - Enter the date of packing.
 - Enter the date of manufacture.
 - Enter the date of expiry.
 - Mention the primary, secondary and tertiary packaging materials.
 - Mention the storage conditions as per organisation standards for light, air and temperature and humidity.
8. Use the observation table and enter the details of the finished/ packed goods.

Precautions:

- Ensure that the entries do not have any incorrect inputs by doing a thorough check.

Observation:

Sr no	Name of finished products	Batch number	Time of packing	Date of manufacture	Date of expiry	Packing materials used	Storage conditions
1							
2							
3							
4							
5							

Conclusion:

Finished goods register updated for the following processed products:

Sr no	Products
1	
2	
3	
4	
5	

6. Food Safety, Hygiene and Sanitation

Unit 6.1 - Safety and Sanitation Functions

10 hrs

Unit 6.2 - Food Safety Hazards

10 hrs

Unit 6.3 - Apply Food Safety Practices

10 hrs

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Demonstrate the process of maintaining personal hygiene and sanitation
2. Identify the agents which are a potential food hazard and can cause adverse health effects
3. Demonstrate and apply food safety practices at workplace

UNIT 6.1: Safety and Sanitation Functions

Unit Objectives

At the end of this unit, you will be able to:

1. Demonstrate the process of maintaining personal hygiene and sanitation

6.1.1 Materials required for the practical

- Cleaning agents
- Sanitisers
- PPE
- Food safety manual
- First aid box
- Tool box

6.1.2 Practical

Pre-requisite knowledge:

- Food safety, hygiene and sanitation

Method:

Personal hygiene

1. Personal cleanliness of food handlers is the most important link in preventing foodborne illness.
2. These personal hygiene habits become a part of their behaviour.
3. Wear suitable clean protective clothing, head covering, face mask, gloves and footwear.

Dos		Don'ts
<ul style="list-style-type: none"> • Hair properly tucked inside the head mask/cap • No jewellery (earrings, necklace etc.) • No outer pockets • Wear neat and clean clothes • No wrist watch • Cover all wounds • Nails trimmed and clean • Torn clothes to be repaired/ replaced • Safety shoes 		<ul style="list-style-type: none"> • Hair coming outside the head mask/cap • Jewellery (earrings, necklace etc.) • Outer pockets and contents • Dirty clothes • Wearing wrist watch • Cover all wounds • Long nails • Torn clothes • Bare feet/slippers

Fig . 6.1.1. Behavioural practices for food handlers – do's and don't's

4. Always clean your hands before beginning work, before handling food and after any activity which may contaminate the food and equipment you are working with.
5. Follow the six simple steps as given for hand sanitation.

Fig . 6.1.2. Hand sanitation

6. Follow the guidelines when to wash hands.

			
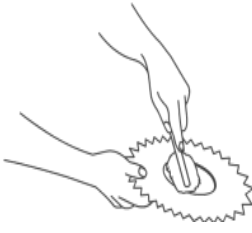

Before and after using toilet/ urinals / rest room	Before serving food/beverages	Before putting on gloves and after taking it off	After eating/ drinking and breaks
			
After using a tissue or handkerchief	After sneezing/ coughing/ scratching any part of your body		
Before and after handling/preparing food items			

Fig . 6.1.3. When to wash hands

Raw material procurement

1. Check all raw materials for visible deterioration, off-odour and for any foreign matter while receiving and storing.
2. Raw materials received in tankers to be checked for seal integrity and only dedicated tankers to be used.
3. Check if the raw materials quantities purchased correspond to storage/preservation capacity of the establishment (follow the SOP).
4. Check for 'expiry date'/ 'best before'/ 'use by date, packaging integrity and storage conditions for packaged raw materials.

Safety symbols and warnings

1. Read the safety symbols, warnings and instructions very carefully.

Fig. 6.1.4. Safety Symbols

2. Before entering into the work area, check that it is not under the prohibited zone.
3. Wear the personal protective equipment before entering the processing line.
4. After entering the working zone, check that required machineries are working properly.
5. Before starting the machine, ensure that machines are plugged to the electric circuit properly.
6. Check if the tool box has the required tools for operations.
7. Ensure the first aid box is placed at the appropriate place and contains all the necessary medicines and equipment.

Fig. 6.1.5. First Aid Box

Precautions:

1. Follow the safety instructions completely.
2. Maintain proper hygiene and sanitation at workplace.
3. Report to the concerned person during any emergency and don't panic.
4. Do not receive or use raw material or ingredients that are spoilt or contain pesticides, veterinary drugs or toxic items or decomposed for processing.

Observation:

Sr no	Materials	Availability and maintenance
1.	List of PPE	
2.	List of Cleaning agents	
3.	List of warnings and symbols present at workplace	

Sr no	Materials	Availability and maintenance
4.	Contents of the tool box	
5.	Contents of the first aid box	

Conclusion:

Write your conclusions here.

Sr no	Why safety at workplace is very important?	
1	Are the necessary PPEs available to carry out the work? (Y/N)	
2	Are the cleaning agents (sanitisers, soaps, etc.) available at workplace? (Y/N)	
3	Are the safety and warning symbols displayed at the workplace? (Y/N)	
4	Is the first-aid kit available with necessary medical aid? (Y/N)	

UNIT 6.2: Food Safety Hazards

Unit Objectives

At the end of this unit, you will be able to:

1. Identify the agents which are a potential food hazard and can cause adverse health effects

6.2.1 Materials required for the practical

- PPE
- Food safety manual
- Food samples

6.2.2 Practical

Pre-requisite knowledge:

- Food safety, hygiene and sanitation.

Method:

1. Identify the types of hazards in food.
2. Check for the possible hazard in the entire process of food production

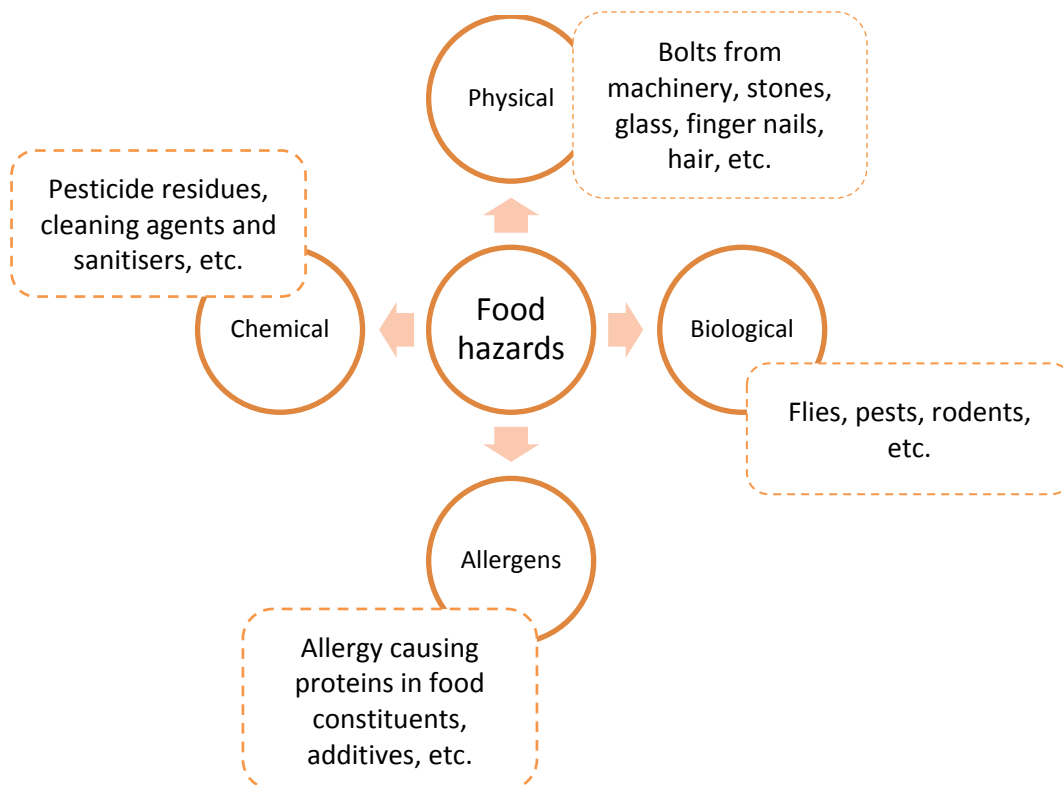

Fig . 6.2.1. Food hazards

			
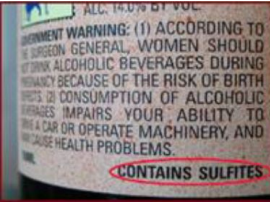

Cereals containing gluten	Eggs and egg products	Fish and fish products	Tree nuts and nut products
			
Peanuts soybeans and its products	Crustacea and its products	Sulphite in concentrations of 10mg/kg or more	Milk products

Fig . 6.2.2. Food allergens

Biological	Hair, excreta, bone splinters, etc. 
Chemical	Pesticide residues, detergents, etc. 
Physical	Bolts from machinery, stones, glass, etc. 

Fig. 6.2.5. Physical contaminants

3. Check the labels of incoming raw materials for appropriate allergen information.
4. Tag the items as appropriate (follow SOP) to ensure that the allergen is clearly identified.
5. Handle the damaged containers appropriately as per SOP to minimise cross-contamination at receipt.
6. Store allergenic ingredients separately or in the designated storage area using clean and closed containers to minimise cross contamination.

7. Check whether the allergens are declared on labels, for all products, including rework, and intermediate products.
8. Use appropriate cleaning methods for e.g. vacuum, soap and water wash, appropriate chemicals) and hand washing at appropriate times (for e.g. after handling a product containing allergens like peanuts etc., clean clothing and other PPE as specified in the SOP.
9. Note down the observations in the observation table.

Precautions:

- Do not store allergens and non-allergens materials together.
- Use safe practices while checking inside the equipment.
- Ensure adequate lighting at all processing and storage area while working.
- Ensure the traffic patterns of raw materials, packaging supplies, and employees are limited during the production of allergen containing products and do not lead to cross-contact.
- Document and use appropriate cleaning procedures for spills or damages of allergens.
- Use dedicated pallets and bins for allergen materials.

Observation:

Sr no	Sample description	Checklist	Observations	Action taken
1		Packing intact/ damaged?		
		Any food contaminants found?		
		Any allergens?		
		Information on the labels as per FSSAI guidelines?		
2		Packing intact/ damaged?		
		Any food contaminants found?		
		Any allergens?		
		Information on the labels as per FSSAI guidelines?		

Conclusion:

Write your conclusions here:

Sr no	Conclusion
1	

UNIT 6.3: Apply Food Safety Practices

Unit Objectives

At the end of this unit, you will be able to:

1. Demonstrate and apply food safety practices at workplace

6.3.1 Materials required for the practical

- PPE
- Food safety manual
- Food samples

6.3.2 Practical

Pre-requisite knowledge:

- Food safety, hygiene and sanitation.

Method:

- Every manufacturing / processing unit should have a Food Safety Management System (FSMS) Plan.
- The purpose of FSMS is to ensure the manufacture, storage, distribution and sale of safe food.

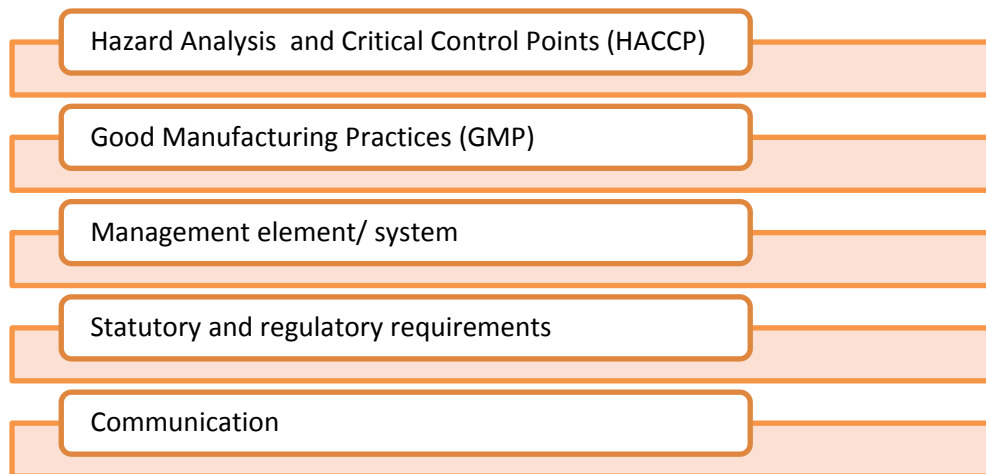

Fig . 6.3.1. Key elements of FSMS

1. As per HACCP principle,
 - Conduct hazard analysis to identify the types of hazard
 - Identify the critical control points.
2. Determine the critical control points (CCP).
3. Analyse the CCP at for each step in the production or process.
4. Refer to the critical limits from safety manual (organisation specific).
5. Establish the critical limits.
6. Monitor the critical limits using the monitoring systems.
7. Apply corrective measures to control the specified limits.
8. Enter the observation records in the log book.
9. Enter the CCP for raw materials in the observation table.

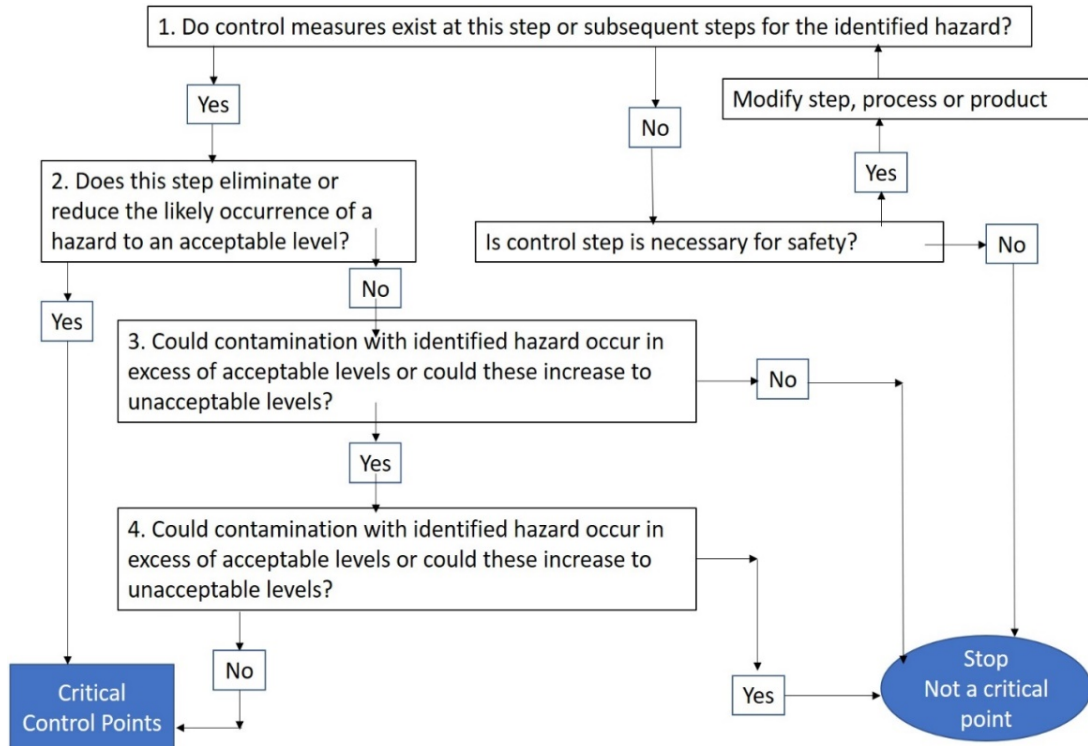

Fig . 6.3.2. CCP decision tree

10. Check for GMP (Good Manufacturing Practices) as per FSSAI guidelines.

- GMP focuses on personal hygiene, process validation, maintenance of equipment, sanitation of the work area.

Fig . 6 3.3. GMP focus areas

GMP checklist

Sr. No.	Focus area	Observation and remarks
1	LOCATION AND LAYOUT OF FOOD ESTABLISHMENT	
	<ul style="list-style-type: none"> Ideally located away from industries which are emitting harmful gases, obnoxious odour, chemical etc. 	
	<ul style="list-style-type: none"> Ceiling roof is of permanent nature floor of building is cemented, tiled or laid in stone/ pakka floor Production area walls are smooth, made with impervious material up to a height of not less than five feet and the junction between the walls and floors are curved Premises of the factory is adequately lighted and ventilated, properly white washed or painted 	
	<ul style="list-style-type: none"> Provision for disposal of refuse and effluents is available Food production/ food service area provided with adequate drainage facility Proper outlets for smoke/ steam etc., like chimney, exhaust fan etc. are installed and the fans installed at a suitable height Doors are provided with automatic door closer Doors, Windows and other openings are fitted with net or screen to prevent insects etc. 	
	<ul style="list-style-type: none"> Antiseptic/ disinfectant foot bath is provided at the entrance Sufficient number of latrine and urinals for worker are provided and located outside the processing hall All the machinery is installed in such a manner which may allow continuous flow of production and do not occupy more than 50% of the total production and permits hygienic production and easy movement 	
2	EQUIPMENT AND FIXTURES	
	<ul style="list-style-type: none"> Equipments kept clean, washed, dried and free from moulds and fungi No such Container/ Vessel/ Equipment's in use likely to cause metallic contamination The table tops used for food preparation are made of close joint and impervious material. The equipment's are made of stainless steel /galvanised iron/ non corrosive materials Appropriate facilities for the cleaning and disinfecting of equipment's and instruments and preferably cleaning in place (CIP) system are adopted; wherever necessary 	
3	STORAGE SYSTEMS	
	<ul style="list-style-type: none"> Appropriate arrangement for storage of food & food ingredients provided and adequately segregated and labelled Raw material, food additives and ingredients, wherever applicable are conforming to regulations laid down under the act 	

Sr. No.	Focus area	Observation and remarks
	<ul style="list-style-type: none"> Containers used for storage are made of non-toxic material 	
	<ul style="list-style-type: none"> Systems to adequately maintain time- temperature control at the time of storage Cold Storage facility, wherever necessary/ provided 	
4	PERSONAL HYGIENE	
	<ul style="list-style-type: none"> Suitable aprons, head cover, disposable gloves & footwear are provided Adequate facilities for toilets, hand wash and footbath, with provision for detergent/bactericidal soap, hand drying facility and nail cutter are provided 	
	<ul style="list-style-type: none"> No person suffering from any infection or contagious disease Arrangements are made to get the staff medically examined once in six months to ensure that they are free from infectious, contagious and other diseases The staff working in such factory are inoculated against the enteric group of disease and vaccinated No employee of such factory who is suffering from a hand or face injury, skin infection or clinically recognisable infectious disease 	
5	WATER SUPPLY	
	<ul style="list-style-type: none"> Adequate supply of potable water Appropriate facilities for safe & clean storage of water 	
	<ul style="list-style-type: none"> The water is examined chemically and bacteriologic ally by a NABL accredited laboratory Ice and steam wherever in use during processing is made from potable water Identifying marks have been applied to the pipelines for easy identification of potable and non-potable water 	
6	PEST CONTROL SYSTEM	
	<ul style="list-style-type: none"> Treatment with permissible chemical, physical or biological agents within the permissible limits are carried out Adequate control measures are in place to prevent insect and rodents from the processing area 	
7	CONVEYANCE AND TRANSPORTATION	
	<ul style="list-style-type: none"> Conveyance and transportation of food being done in an appropriate state of cleanliness, particularly if the same vehicle has been used to carry non-food items The conveyance and transportation are provided with temperature control system 	
8	CLEANING AND MAINTENANCE	
	<p>Cleaning and sanitation programme is drawn up, observed and the record of the same is properly maintained</p> <p>Food preparation areas are cleaned at regular intervals, with water, and detergent and with the use of a disinfectant</p>	

Sr. No.	Focus area	Observation and remarks
9	OPERATIONAL FEATURES	
	<ul style="list-style-type: none"> The source and standards of raw material used are of optimum quality and as per regulation and standards laid down under the Act Test report from own or NABL accredited/ FSSAI notified labs regarding microbiological contaminants in food items are available Arrangements for monitoring temperature and relative humidity 	
10	DOCUMENTATION AND RECORDS	
	<ul style="list-style-type: none"> Records of daily production, raw material utilized and sales are available A periodic audit of the whole system according to the Standard Operating Procedure (SOP) conducted regarding Good Manufacturing Practices/Good Hygienic Practices (GMP/ GHP) system Appropriate records of food processing/ preparation, food quality, laboratory test results, pest control etc. for a period of 1 year or the shelf -life of the product; whichever is more Records of sale and purchase that the food product sold to registered/licensed vendor and raw material purchased from registered/ licensed supplier Recall plan 	
11	PRODUCT INFORMATION AND CONSUMER AWARENESS	
	All packaged food products carrying label and requisite information as per Regulations are made	
12	TRAINING	
	Food production personnel and production floor managers/ supervisors underwent appropriate food hygiene training

Precautions:

- Ensure that critical control points are maintained as per HACCP principle.

Observation:

Sr no	Raw material	CCP limit to be maintained as per specifications	CCP limit maintained (Y/N)

Conclusion:

Sr no	Are records relating to safety maintained in the Log Book (Y/N)?
1	

FSMS Plan

Hazard	Control measure	Critical limit	Monitoring method	Corrective action	Responsibility	Record
Physical hazard (dirt, stone, particles)	Supplier guarantee specifications established by quality assurance department	As per company internal specifications	Supplier guarantee certificate is visually confirmed	Reject material if not accompanied by supplier	Reject material if not accompanied by supplier	Supplier Guarantee
Chemicals (toxins, pesticides from raw material)	Relative humidity-maintained store					
Relative humidity-maintained store	FIFO system should be established		Monitor temperature and humidity of storage			Store temperature log

7. Professional and Core Skills

FICSI
Food Industry Capacity and Skill Initiative

Unit 7.1 - SWOT Analysis	30 mins
Unit 7.2 - Decision Making	30 mins
Unit 7.3 - Plan and Organise	1 hr
Unit 7.4 - Customer Centricity	1 hr
Unit 7.5 - Problem Solving	1 hr
Unit 7.6 - Analytical Thinking	1 hr
Unit 7.7 - Critical Thinking	1 hr

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Undertake a self-assessment test
2. Identify personal strengths and weaknesses
3. Choose between two or more courses of action to solve problems quickly and effectively
4. Plan and schedule activities or task assigned in an organised way
5. Manage time effectively to complete the tasks assigned
6. Identify customer requirements and their priority and respond accordingly
7. Identify potential problems to make sound and timely decisions
8. Apply analytical skills and its attributes to make decisions and solve problems
9. Develop critical thinking skills to prevent potential problems
10. Develop critical thinking skills to resolve issues

UNIT 7.1: SWOT Analysis

Unit Objectives

At the end of this unit, you will be able to:

1. Undertake a self-assessment test
2. Identify personal strengths and weaknesses

7.1.1 SWOT analysis

Write your strengths, weaknesses, opportunities, and threats in the 4 sections here.

Strengths	Weaknesses
Opportunities	Threats

Fig.7.1.1. SWOT Analysis

1. Was this activity helpful in doing a self-assessment?

2. What were some of the most interesting things you discovered about yourself during the activity?

UNIT 7.2: Decision Making

Unit Objectives

At the end of this unit, you will be able to:

1. Choose between two or more courses of action to solve problems quickly and effectively

7.2.1 What is decision making?

Decision making is an act of choosing between two or more courses of action. There may not always be a 'correct' decision among the available choices. There may have been a better choice that had not been considered, or the right information may not have been available at the time.

7.2.2 Techniques of decision making

Decision making is an act of choosing between two or more courses of action. There may not always be a 'correct' decision among the available choices. There may have been a better choice that had not been considered, or the right information may not have been available at the time. Many different techniques of decision making have been developed. The method used depends on the nature of the decision to be made and how complex it is. The stages of the method are as follows:

Fig.7.2.1 Steps for decision making

7.2.3 Develop Decision Making Skills

- Please answer each of the following questions as honestly as possible.
- Circle your answer for each question.
- Refer to the result table given below and evaluate the result of your answers.

Sr. No.	Decision making skills	Mark where you stand (Circle your answer)				
		Strongly Agree	Agree	Somewhat Agree	Somewhat Disagree	Strongly Disagree
1	Desire to actively participate in the process of solving/ improving a situation	5	4	3	2	1

2	Too much analysis of situation results in delaying decision	5	4	3	2	1
3	Respect other people's suggestion and recommendations	5	4	3	2	1
4	Analyse and calculate the risk and problems which may occur after taking a decision	5	4	3	2	1
5	Follow workplace rules and guidelines in situations involving high level of risk at work	5	4	3	2	1
6	Use your job specification to take appropriate decision	5	4	3	2	1
7	Do not hesitate to consult your supervisors and subordinates before arriving to a decision point	5	4	3	2	1
8	Do not make workplace decision based on emotions	5	4	3	2	1

- Evaluate your answers after you complete the above table.
- Check the result for each question if your answer is:

Score	Evaluation	Result
1 - 3	You need to work hard to develop this quality	Work hard
4	You possess this quality but need to enhance it for better success	Keep improving
5	You possess this quality and this is your strength use it to make timely and effective decision	Use this strength

My Score	What should you do?

UNIT 7.3: Plan and Organise

Unit Objectives

At the end of this unit, you will be able to:

1. Plan and schedule activities or task assigned in an organised way
2. Manage time effectively to complete the tasks assigned

7.3.1 Ways to plan and organise yourself at workplace

- Organising and planning is a process of completing a given task efficiently and successfully.
- Organising and planning includes:

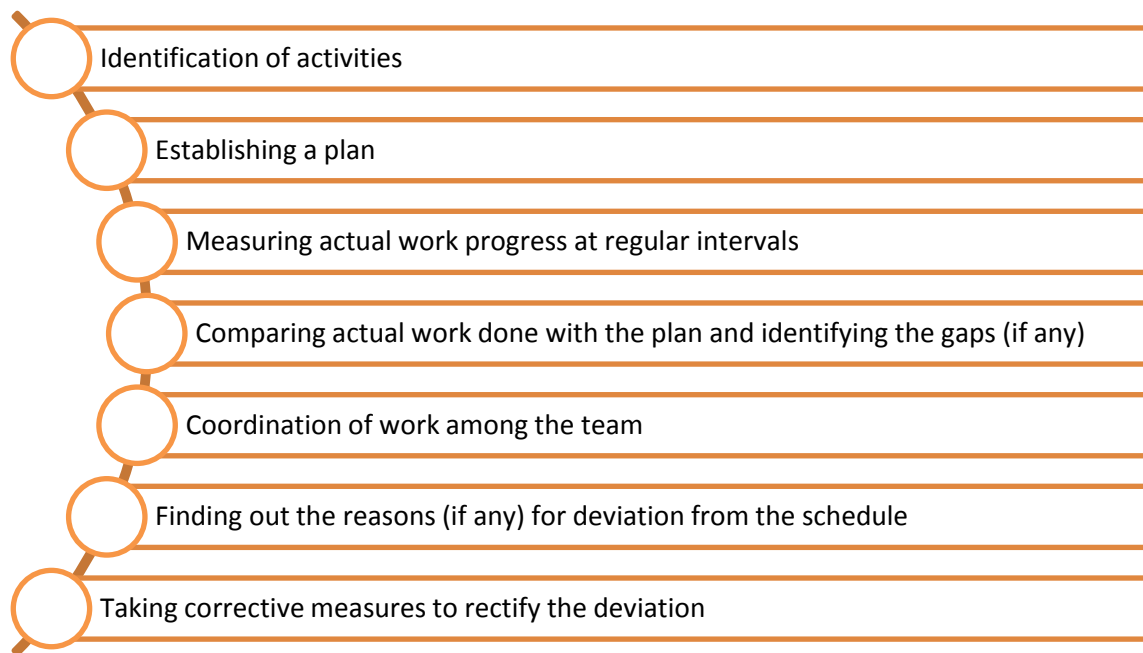

Fig.7.3.1 Ways to plan and organize yourself

7.3.2 Benefits of organising and planning

1. Write the benefits of organizing.

2. Write the benefits of planning.

7.3.3 Time management

It is easy to manage our time effectively, especially if we follow a few simple steps.

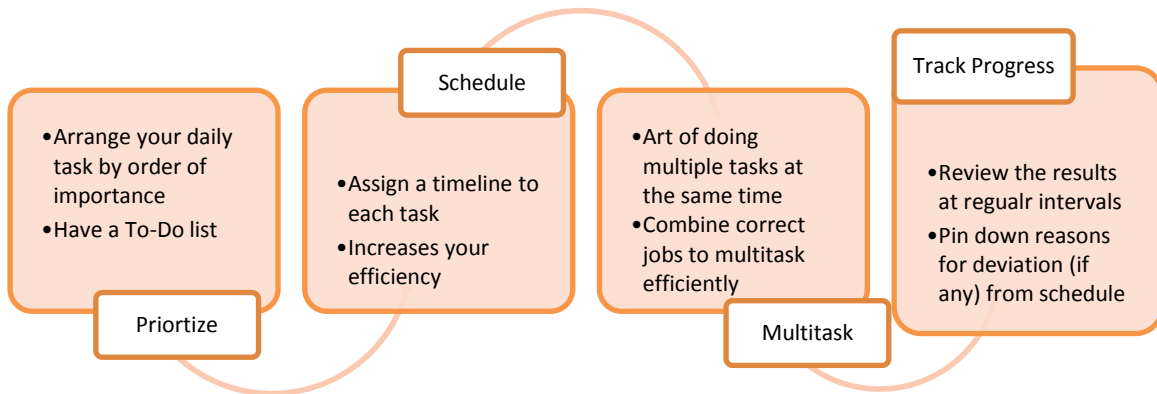

Fig: 7.3.2 Steps to manage time effectively

7.3.4 Ways to manage your work hours in the most effective

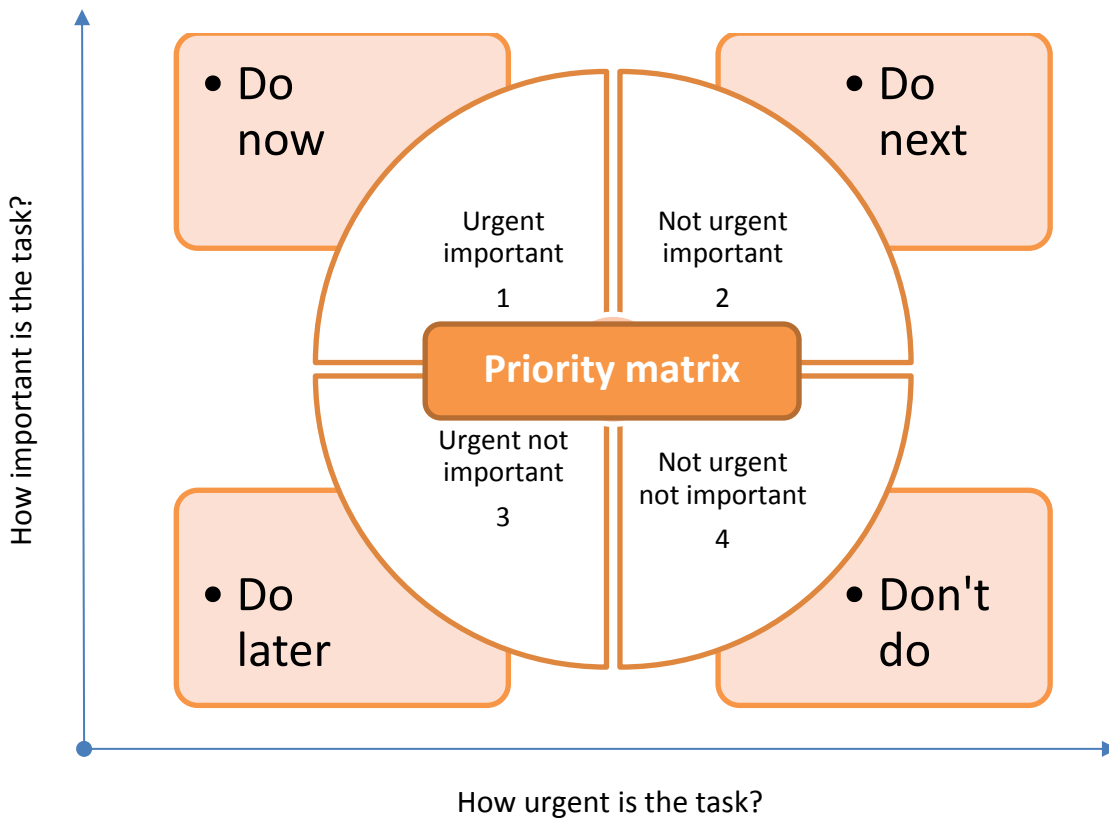

Fig . 7.3.3. Priority matrix

7.3.5 To-Do list

Create a To-Do list to keep track of the job received identifying the priority

Sr no	Date	Job code/ number	Task/ activities	Target completion	Priority
1					
2					
3					
4					
5					
6					

UNIT 7.4: Customer Centricity

Unit Objectives

At the end of this unit, you will be able to:

1. Identify customer requirements and their priority and respond accordingly

7.4.1 How to maximise customer service?

Customer service is an integral part of any business. A good customer service can lead to:

- increase in sales and profit
- business goodwill
- most importantly, loyal customers.

Fig.7.4.1. Ways to maximise customer service

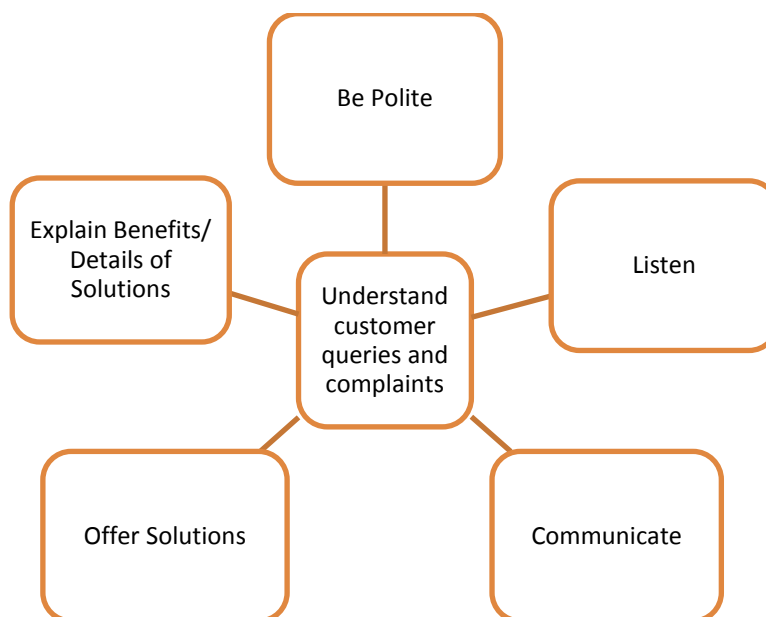

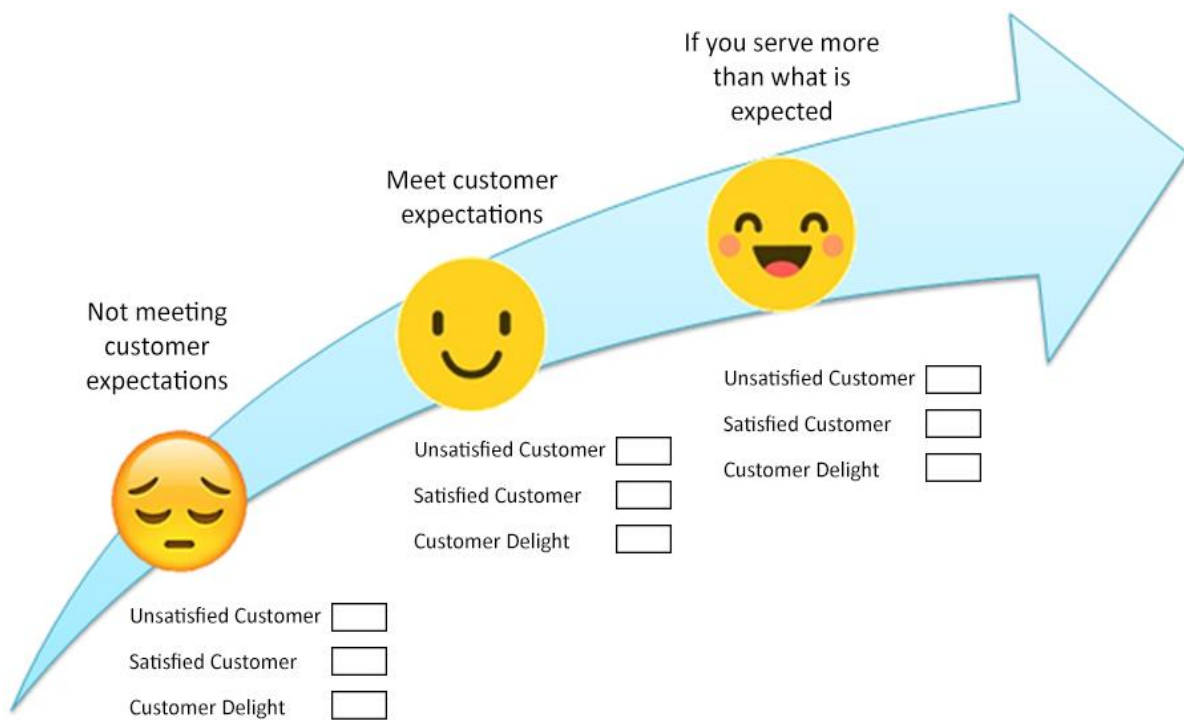

Fig.7.4.2. Understand customer queries and complaints

7.4.2 Maximise customer satisfaction

- Understand customer needs and expectations
- Provide high quality service
- Provide assistance before, during and after customer requirements are met

Fig.7.4.3. Customer satisfaction parameters

Select the right customer against the service quality given (mark a tick against the correct answer):

Not meeting customer expectations

Meet customer expectations

If you serve more than what is expected

Unsatisfied Customer

Satisfied Customer

Customer Delight

Unsatisfied Customer

Satisfied Customer

Customer Delight

Unsatisfied Customer

Satisfied Customer

Customer Delight

List the benefits of a good customer service:

A satisfied customer will become a repeat customer

One satisfied customer will bring in 10 other customers

UNIT 7.5: Problem Solving

Unit Objectives

At the end of this unit, you will be able to:

1. Identify potential problems to make sound and timely decisions

7.5.1 What is a problem?

A problem is a situation faced by an individual or a group that requires resolution. The apparent path for the solution may or may not be visible to people initially. Problem is what is different between 'what is' and 'what can' or 'should be'. It is usually an unwelcome and difficult situation that everybody faces in their lives.

Whether it is the personal life or a professional one, problems are a part of everybody's life because life is unpredictable. Surrendering to the problem and resigning to it is not always a good solution. A person needs tactics to solve it, learn from it and prevent it in the future.

7.5.2 Steps in problem solving

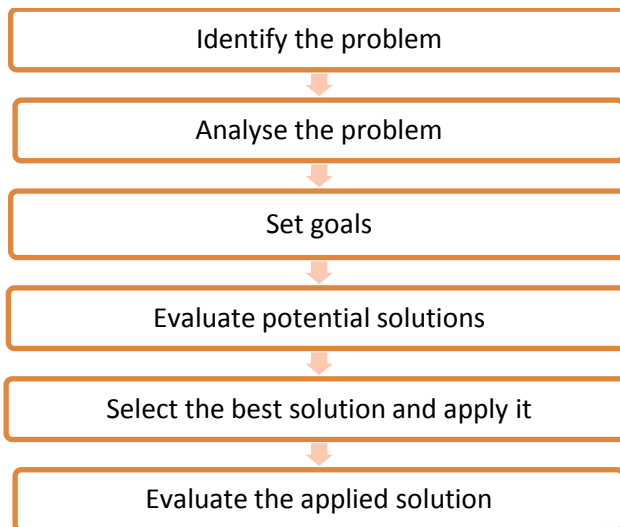

Fig .7.5.1. Steps in problem solving

Write your problem statement here (for eg: The output or product is not as per the desired quality and specifications) and use the template given to solve the problem.

Sr no	Steps to solve the problems	Notes for problem solving
1	Identify the problem	
	Identify what is wrong	
	Speak about it to your peers	
2	Analyse the problem	
	What is the issue?	
	Why did it happen?	
	When did it get noticed?	
3	Who is going to get affected by it	
	Set goals	
	What do I want?	
	What is the current state and what is the desired state?	
	What are the steps that I should take to resolve the issue?	
	Am I following the steps and finishing on time?	
4	What is getting in my way of reaching the desired outcome?	
	Evaluate potential solutions	
	What are the different options that will solve the problem?	
5	What are the positives and negatives of each option?	
	Select the best solution and apply it	
6	Which one do you think is the best solution?	
	How will you apply the best solution?	
6	Evaluate the applied solution	
	Was my solution the best one?	
	Did I have a better way of solving the issue?	
	Did I judge the problem correctly?	
	Could I stop the loss?	
	Can I apply this solution next time for a similar problem?	

UNIT 7.6: Analytical Thinking

Unit Objectives

At the end of this unit, you will be able to:

1. Apply analytical skills and its attributes to make decisions and solve problems.

7.6.1 What are analytical skills?

Analytical skills refer to the ability to collect information, analyse information, make decisions, and solve problems.

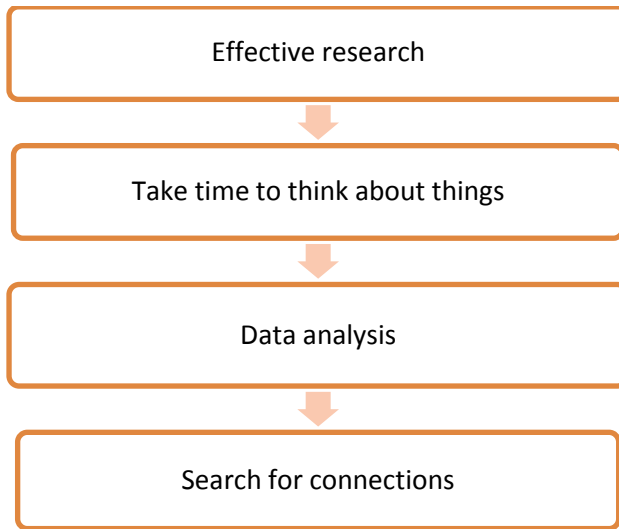

Fig.7.6.1. Analytical skills

7.6.2 How can you develop analytical skills?

- Use this template for developing your analytical skills.
- If you already possess analytical skills, you may continue enhancing them, and if you don't then work on developing it.

Sr.No.	How can I develop my analytical skills	I need to
1	Do effective research	
	Read books or newspapers, watch documentary movies, attend lectures etc.	
2	Take time to think about things	
	Think and reflect about things, instead of making quick and rash decisions	
	Consider multiple sides of a problem before picking a solution	
3	Do data analysis	
	After procuring information you should analyse it	
	Data analysis is simply the ability to find and detect patterns in a volume of information	

4	Search for connections
	Correlation about things in terms of cause and effect (for eg: The output or product is not as per the desired quality and specifications)
	Think about the similarities between things (for example, bread making and biscuit making, wheat flour and maida, paneer and cheese, pulp and juice, etc.)

UNIT 7.7: Critical Thinking Skills

Unit Objectives

At the end of this unit, you will be able to:

1. Develop critical thinking skills to prevent potential problems
2. Develop critical thinking skills to resolve issues

7.7.1 Critical thinking

- Critical thinking includes the ability to think clearly and rationally. It also involves the ability to engage in reflective and independent thinking.
- In critical thinking, there is no conclusion; it is constant interaction with changing circumstances and new knowledge.

7.7.2 How to develop critical thinking skills?

1. Write your problem statement here:

2. Use critical thinking skills to solve the problem. Here are some tips to do it.

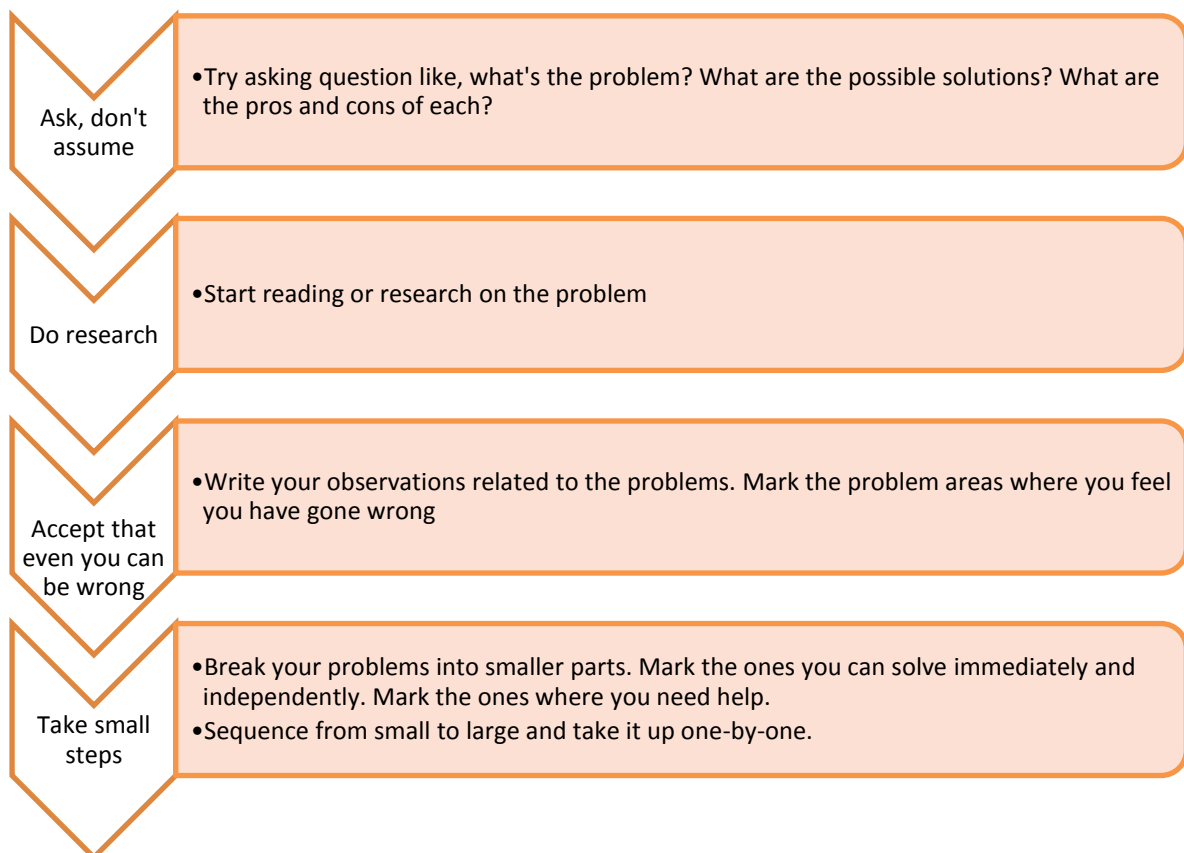

Fig.7.7.1. Tips to solve problems

8. IT Orientation

Unit 8.1 - Basics of Information Technology

15 hrs

Key Learning Outcomes

At the end of this unit, you will be able to:

1. Identify the different parts of a computer
2. Use the keyboard and mouse effectively
3. Use the applications Word processor and Spreadsheet effectively

UNIT 8.1: Basics of Information Technology

Unit Objectives

At the end of this unit, you will be able to:

1. Identify the different parts of a computer
2. Use the keyboard and mouse effectively
3. Use the applications Word processor and Spreadsheet effectively

8.1.1 Computer Basics

Computing is an important part of everyday life in the twenty-first century. From music and photos to banking and communicating, computers have changed the way we work and live. This course introduces you to the fundamentals of computing, explains the components of a computer, explores operating system basics, and shows you how to use a mouse and a keyboard. Also explains how computers can be used in different aspects of life.

Benefits

Computers are used in every field. They help organizations and individuals to conduct business transactions efficiently and quickly. Today, one of the basic skills necessary to succeed at a workplace is to know how to use the computer. To be able to get better jobs, you need to know how to use a computer.

8.1.2 Introduction to Computers

What is a Computer?

Computer plays a very important role in our personal and professional lives. It has become an integral part of our lives.

Computers are electronic devices that perform the basic operations of input, processing storage, and output under the direction and control of a program. It has the ability to store, retrieve and process data. A computer is used to:

- Send e-mails
- Make Presentations
- Maintain Records
- Write Text
- Organize Files
- Surf the internet for relevant information
- And more

Fig.8.1.1. Process of computer

8.1.3 How does the Computer Work

The different parts of the computer need to talk to each other to do things for us. When you type letters on the keyboard, the keyboard sends a message through a wire to the System Unit which in turn sends a message to the monitor, they show those letters on screen. So, only when all the parts are connected the computer can function properly.

Hardware is nothing but the internal and external physical components of a computer system.

The external components are the:

- Monitor
- Keyboard
- Mouse
- System Unit
- Printer and Speakers

The internal components are the:

- Motherboard
- Central Processing Unit (CPU)
- RAM
- Internal Buses, etc

These internal components present inside the System Unit make it possible for the computer to process commands received from the input devices and perform a particular task.

Software is a collection of computer programs and related data that provide instructions telling a computer what to do. In contrast to hardware, software is intangible, meaning it “cannot be touched”.

Few examples of Computer Software

Application Software	Word Processors or Video games
Programming Software/ Languages	Define the syntax and semantics of computer programs
System Software	Operating Systems that allow the user to interface with the computer

Important Characteristics of a Computer

Speed: Computers provide the processing speed required by all sectors of service. The quick service we expect at the bank, at the grocery store, on the stock exchange, and on the Internet are dependent on the speed of computers.

Reliability: Humans, not computers, cause most errors.

Storage: Computers are capable of storing enormous amounts of data that must be located and retrieved very quickly.

Capacity: The capability to store and retrieve volumes of data is crucial for the Information Age.

Productivity: Computers provide the processing speed.

Applications of Computer

Business: To track inventories with bar codes and scanners, check the credit status of customers, and transfer funds electronically.

Homes: The tiny computers embedded in the electronic circuitry of most appliances control the indoor temperature, operate home security systems, tell the time, and turn video cassette recorders on and off.

Automobiles: They regulate the flow of fuel, thereby increasing petrol mileage.

Entertainment: They are used to create digitised sound on stereo systems or computer – animated features from a digitally encoded laser disc.

Education: Computers are used to track grades and prepare notes; with computer – controlled projection units, they can add graphics, sound, and animation to enrich lectures.

Scientific Research: Computers are used to solve mathematical problems, display complicated data, or model systems that are too costly or impractical to build, such as testing the airflow around the next generation of space shuttles.

Defence/Military: Computers are used in sophisticated communications to encode and unscramble messages, and to keep track of personnel and supplies.

The Different Components; Peripherals and it’s Uses of a Computer

Input Devices: They are devices that convey information to the computer

Eg.:Keyboard; Scanner; Mouse; Mic or Microphone

Output Devices: Wherein the information is processed and displayed

Eg.:Printer; Monitor; Speaker etc.

Fig. 8.1.2. Components of a Computer

8.1.4 Mouse

Mouse is used to point and select. Always place the mouse on a mouse pad.

The different types of mouse available are:

Mouse is used to point and select.

Fig.8.1.7. Mouse

Click	Use	How to Use
(Left) Click	Select	Press and release the button without moving the mouse.
Click and Drag	Move	Press and do not release the left mouse button, and then move the mouse with the button still held down, and finally release the button.
(Left) Double-click	Open	Press and release the left mouse button twice in rapid succession without moving the mouse.
Right-click	Display usable dropdown menu	Press and release the right mouse button, without moving the mouse.

8.1.5 Keyboard

The Keyboard is made up of Number and Letter keys. Keyboard is used for typing and the monitor shows what is typed. But first the keyboard tells the System Unit what to do and the System Unit gives this message to the monitor.

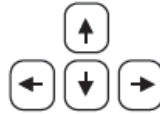

Fig.8.1.8. Keyboard

Different Set of Keys	Description
<p>Fig.8.1.9. Alphabet Keys</p>	The keyboard has 26 letter keys from A to Z called the alphabet keys.
<p>Fig.8.1.10. Numeric Keys</p>	The number keys (0 to 9) are called 'numeric keys'.

 <p><i>Fig.8.1.11. Symbol on the number keyboard</i></p>	<p>The longest key on the keyboard is the 'spacebar.'</p>
 <p><i>Fig.8.1.12. Spacebar</i></p>	<p>It is used to put an empty space in between letters and numbers.</p>
 <p><i>Fig.8.1.13. Esc key</i></p>	<p>The key that stands alone on the top left corner is the 'escape key'.</p>
 <p><i>Fig.8.1.14. Arrow keys</i></p>	<p>The set of four keys that have arrows on them are the 'arrow keys'.</p>

Finger Key Coordination

Fig.8.1.15. Finger Key Coordination

8.1.6 Computer Peripherals

Fig.8.1.16. Printer

It is a device that prints text or illustrations on paper. There are different types of printers like dot-matrix, ink-Jet, laser etc.

All the parts are connected to system unit with cables or wires. The system unit in turn is connected to the main power supply.

Fig.8.1.17. Speakers

Speakers are devices used to listen to music, voices and other sounds.

Fig.8.1.18. Microphone

The microphone converts sound inputs by the user into a format understood by the computer. It is used for sound recording.

Fig.8.1.19. Web camera

These are small cameras (usually, though not always, video cameras), whose images can be accessed using the World Wide Web, instant messaging like hotmail, Google talk, or a PC video conferencing application.

Fig.8.1.20. Scanner

The scanner converts print data into electronic data. Images and text available in books, newspapers and magazines can be scanned and used as computer data. The scanner is similar to a photocopier machine, except here the copy comes in electronic format.

Fig.8.1.21. Hard Disk

Stationary (fixed) storage devices are fixed on the hard disk drive inside the system unit. They can store large amounts of data (eg. 40 to 300 GB data), and can be used only in a particular machine.

Fig.8.1.22. CD-ROM

Compact Disk- Read Only Memory is a mobile storage device. It can store around 800 MB of data. Data copied to a CD-ROM cannot be edited directly.

Fig.8.1.23. Flash Drives

They are mobile storage devices. They can store from 540 MB to 16 GB of data and the data can be edited directly.

8.1.7 Using a Computer

How to Start your Computer

- First, plug in the computer and switch it on.
- Turn on the UPS.
- Turn on the system unit by pressing the power button.
- This may cause a small light to turn on and then the monitor to turn on. Let the computer start. The computer will check all of its components and if everything is running smoothly, it will display the welcome screen, and then to the user screen.
- Type in the password if you have set one.
- Once the booting process is over the following window is displayed.

Fig.8.1.24. Plug in the computer to switch it on

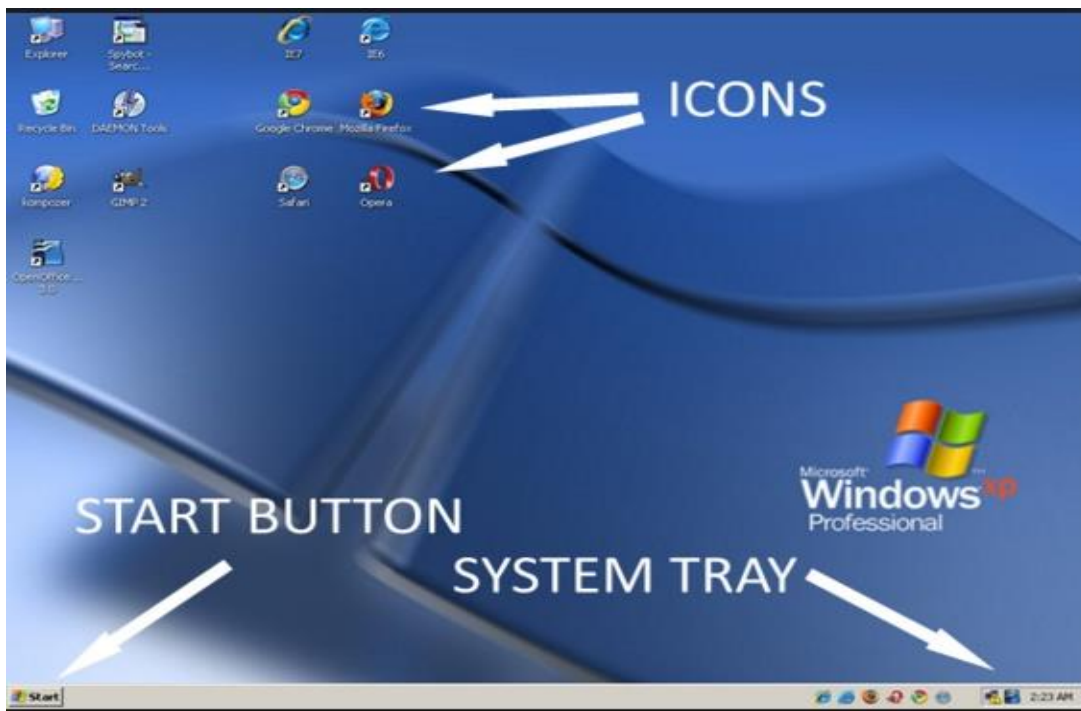

Fig.8.1.25. Displayed Window

How to Shut down your Computer

- Never just switch off your computer – you may lose unsaved information and damage your computer’s hard disk drive or may lose the saved information too!
- To shut down your computer properly, close all open applications.
- Click on the Start button.
- Select the ‘Turn off’ option by clicking on it.
- Click on the ‘Yes’ button to confirm selection.

Fig.8.1.26. Start bar

Fig.8.1.27. Turn off option

8.1.8 Word Processor (MS Word 2010)

Introduction to MS Word

Microsoft Word 2010 is a word-processing program, designed to help you create professional-quality documents. With the finest document-formatting tools, Word helps you organize and write your documents more efficiently. Word also includes powerful editing and revising tools so that you can collaborate with others easily.

Getting Started

Now that you have an understanding of where things are located, let's look at the steps needed to create a document.

Opening Outlook

You may have a shortcut to Word on your desktop, if so double click the icon and Word will open. If not follow the steps below:

1. Click on the Start button
2. Highlight Programs
3. Highlight Microsoft Office
4. Click on Microsoft Word 2010

Fig.8.1.28. Start → Programs → Microsoft Office → Microsoft Word 2010

Create a New Document

1. Click the File tab and then click New.
2. Under Available Templates, click Blank Document.
3. Click Create.

8.1.9 Spreadsheet (MS Excel 2010)

Introduction to MS Excel

This is to introduce you to using Microsoft Excel if you're unfamiliar with any major aspect of it. The topics will lead you through the fundamentals of creating and working with Excel spreadsheets. Today's Excel spreadsheet isn't just for financial professionals. Microsoft Excel offers intuitive tools that make it easy to access, connect, and analyze critical data—regardless of your profession. The first step in learning to use your new software is to start (or in computer parlance: launch) the Excel Program.

Launch Excel:

1. SELECT (Click) the Windows **Start** button; this will bring up a set of choices in a menu.
2. Select **Programs**. Another menu will appear to the right.
3. Locate and Select **Microsoft Office** and another menu will appear on the right.
4. Locate and Select **Microsoft Office Excel 2010**. You have now launched Excel.

When Excel starts, it creates a new blank workbook, called **Book 1**. The **Workbook** is similar to a notebook. Inside you have sheets, each of which is called a **worksheet**. Each worksheet has a name that appears on a **sheet tab** at the bottom of the workbook.
